Elevator Control With Designated Level

Levels Assigned by Users

Once the hotel lock is connected to the elevator and access control module, the ZKTeco elevator control will allow different user to access floors, it can be assigned with different rights, and unauthorized users are not allowed to access those important floors. In the actual implementation, users have to present card on the elevator, and the elevator will allow user to reach to the assigned level. This will enable the security management of the whole building elevator access control using the elevator controller installed on each elevator car.

Users have to present card on the elevator, if the users has the access right, they will be allowed to go to the designated level, otherwise, the elevator will stay at the present floor.

Elevator Operation Limitation by Timeslots

ZKTeco Elevator Control is able to limit elevators' operation in specific time. For actual implementation, if the elevator control was set to stop operating to go upward between 9:00 p.m. to 7:00 a.m., Unauthorized persons will only be allowed to go downward even with cards for floor access.

9:00pm - 7:00am

Intuitive Design - Web Based Reservation Management

Hotel Module has an intuitive design which is easy to understand without explanation. It combines RFID lock technology with the freedom to choose the door access right for the guest. Just simply click in the room no. that people would like to stay on the ZKBiosucurity, Hotel guests will gain access to the assigned rooms with the card within the corresponding date and time.

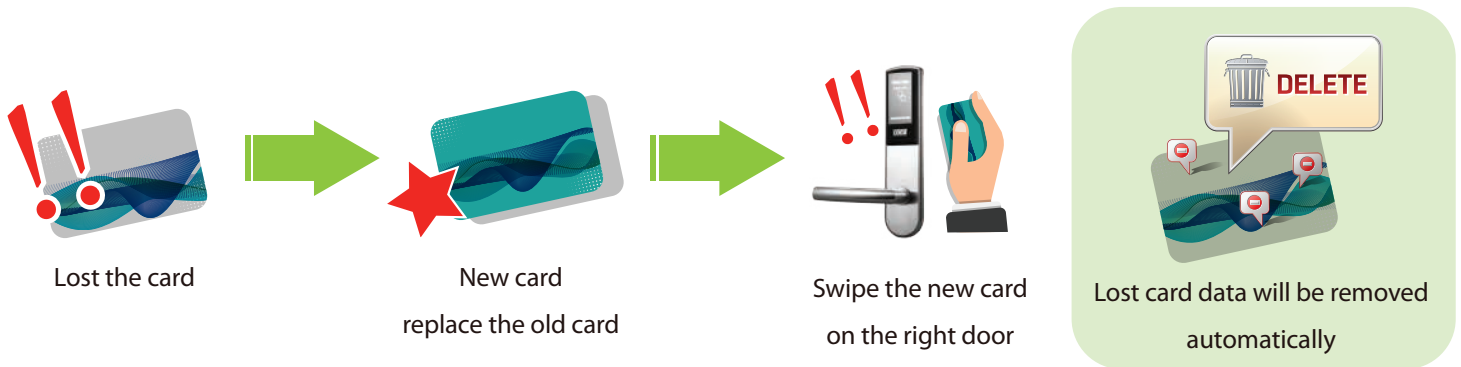

Web Based Registration Management

Elevator control allows the guest to stop the elevator on the specific time, and grants elevator to operate if the elevator to work if there is a booking for the other location. For example, to reserve the hotel room for and the elevator, the hotel staff just simply click out the corresponding date and time via ZKBiosecurity software web based platform. This proven and recognized procedure can prevent the guest re-enter the hotel room and the elevator with the lost card.

Report Lost Card

Guests are given the hotel card upon registration at the reception, if the guests lose their hotel room, hotel staff just simply adopt the "Report Lost Card" function and make a new card to replace the lost card. Swipe the new card on the right door lock which will therefore activate the new card and remove lost/ stolen cards' data from the system.

Advance Payment Option of Consumption Management

Hotels guests often need to make payments by cash or credits. ZKBioSecurity offers an advanced option for guests to pay later when checking out. Simply present hotel cards after having meal wherever at hotel lounges, coffee shops or restaurants, and guests may pay charges when leaving the hotel.
